Dear Members of the Public Service Commission:

I am writing to support changing net metering rules to encourage a wider use of solar energy in South Carolina. I am extremely hopeful that you are developing progressive policies that will move South Carolina toward reducing our dependency on fossil fuels.

Specifically, I strongly encourage and support your increasing the current 100 kw limits for generating solar energy for commercial systems. South Carolina must also increase the cap for individuals and nonprofits. The current limits are beginning to squeeze congregations, businesses and schools.

Raising the .2% cap for total statewide capacity to 2% of peak demand would enable more households and nonprofits to utilize solar power.

I am also requesting that you immediately reschedule the cancelled public forum to allow a transparent discussion about solar energy in South Carolina.

Sincerely,

Susan Griswold
